

MANIKANTH GOUD GURUJALA

+1 (604) 365-7680 — manikanthgoud27@gmail.com — [LinkedIn](#) — [GitHub](#) — [Portfolio](#) — Vancouver, BC

PROFILE SUMMARY

- **Data analyst** with hands-on experience turning **messy, multi-source data** into reliable, well-documented **data products**: designing **data quality** and validation frameworks, integrating structured and unstructured datasets, and supporting **production deployment**.
- Analytical and self-directed: built and shipped an open-source **data validation** package for assessing dataset quality, reliability, and drift, and diagnosed a subtle statistical flaw that was producing misleadingly optimistic results on a live project.
- **UBC Master of Data Science** graduate (June 2026), **BEng** in Mechatronic Engineering, strong **SQL, Python**, and **statistical** foundations, with a track record of **presenting findings** to cross-functional stakeholders.

EDUCATION

Master of Data Science

Sept 2025 – Jun 2026

The University of British Columbia (UBC), Vancouver, BC

Relevant Courses: Machine Learning, Big Data Systems, Time Series Analysis, Causal Inference.

Bachelor of Mechatronic Engineering with Honors

Nov 2019 – Mar 2024

Asia Pacific University of Technology and Innovation (APU), Kuala Lumpur, Malaysia

WORK EXPERIENCE

Data Scientist - VRIFY (Capstone), Vancouver, BC

Apr 2026 – Jun 2026

- Assessed, explored, and integrated **multi-source data** (130+ features per site) into a unified schema for modelling, with automated **data validation** and **feature engineering** (reduced 360+ candidate features via **RFE** and multicollinearity analysis).
- Diagnosed a hidden flaw in an initial evaluation setup producing misleadingly strong results, implemented rigorous **validation** as a quality gate to catch bias before it reached production, and documented the decision for the team.
- Built visual diagnostics (scatter, residual, and spatial plots) and **presented findings** on model reliability and accuracy to domain-expert stakeholders.
- Built scalable **data pipelines** on **Databricks** to support production deployment and long-term reliability of the final model.
- Collaborated with a cross-functional team of data scientists and domain experts, proactively soliciting feedback and communicating trade-offs through regular check-ins over a 3-month timeline.

AI/ML Intern, UltraTech Cement, Mumbai, India

Oct 2024 – Dec 2024

- Built **monitoring dashboards** giving stakeholders observability into **production** model performance and operating costs, cutting costs by 15% and manual reporting time by 40%.
- Deployed computer-vision models for real-time **production** monitoring across multiple industrial sites, achieving 88%+ accuracy and improving response times by 30%.
- Analysed operational data to optimise procurement and logistics using discrete-event simulations, reducing transportation costs and improving scheduling efficiency.

TECHNICAL PROJECTS

CodeIQ: Source Code Knowledge Graph, HCLTech × UBC AI/ML program

July 2026

- Built a code intelligence tool that parses a 100K-line codebase into a queryable **knowledge graph** via AST extraction, with a **ChromaDB** semantic vector index so answers cite real sources.

Hybrid Retrieval System (983K Amazon Reviews)

April 2026

- Built a hybrid retrieval pipeline (**BM25 + FAISS**) over 1.6M indexed chunks, combining structured metadata with unstructured review text, with retrieval-metric evaluation; [deployed live on Streamlit Cloud](#).

North American Crime Dashboard, UBC

March 2026

- Built and [deployed](#) an interactive dashboard with a geocoded map and a natural-language query tab for self-service data exploration.

Open-Source Data Validation Package, UBC

Feb 2026

- Designed a modular **Python** package for defining, validating, and comparing **data contracts** on tabular data: schema, missingness, numeric range, and categorical domain checks, plus drift detection between datasets over time.
- Shipped with Codecov-tracked tests, an automated **GitHub Actions** release pipeline, and hosted documentation, enforcing **code review** across the team.

TECHNICAL SKILLS

- **Data Quality & Engineering**: **Data validation**, data contracts, drift detection, **ETL** pipelines, **Databricks**, **PySpark**, DuckDB, Parquet, **SQL**, **Big Data Analytics**.
- **Analytics & ML**: **Python** (Pandas, NumPy, Scikit-learn), statistical methods, **exploratory data analysis**, regression, classification, **Feature Engineering**, **PyTorch**, A/B Testing.
- **Production & MLOps**: **CI/CD** (GitHub Actions), **Docker**, **MLflow**, Model Registry, **AWS**, monitoring and observability.
- **Software Engineering**: **Git** version control, automated **testing**, **code reviews**, technical **documentation**, modular system design.
- **Communication**: Presenting findings to technical and non-technical stakeholders, cross-functional collaboration, written documentation.
